PROFILE

I am a technology professional with a strong background in data analysis and growing experience in, Full Stack development, combining logic, data, and application building. I have experience with Python, JavaScript, SQL, REST API integration, and process automation, developing solutions that connect information, systems, and decision-making. I am currently pursuing a degree in Systems Analysis and Development, focusing on web application development, front-end and back-end integration, and the use of Generative AI to create more efficient and intelligent solutions.
